

Advanced Level 7 Lesson

LESSON 7

DROPPING COMMON ZEROS

SUBTRACT IN
YOUR HEAD

$$90 - 50$$

When the numbers end in zero,
use a shortcut.

Drop the common zeros.

$9 - 5 = 4 \dots$
so it's 40.

Sometimes there are different
shortcuts for the same problem.

$$860 - 300$$

$86 - 30 = 56$
with one zero,
or 560.

$8 - 3 = 5$
That's 500 with
60 more, or 560.

Both shortcuts work.
Which do you like better?

TRY THESE IN YOUR HEAD.

What shortcut will you use?

1. $80 - 30$

3. $1400 - 500$

7. $850 - 30$

2. $800 - 600$

4. $680 - 200$

8. $1680 - 20$

5. $940 - 700$

9. $2470 - 300$

6. $590 - 300$

10. $1230 - 200$
